Safety Technique

SAFEMASTER STS Safety Switch- And Key Interlock System Basic Unit STS-SXB01M

Presentation in the deactivated condition: Actuator and key removed

STS-System Benefits

- TÜV certificate according to the legal and standard requirements
- For safety applications up to PLe/Category 4 according to EN/ISO 13849-1
- Modular and expandable system
- · Rugged stainless steel design
- Wireless mechanical safeguarding
- Combines the benefits of safety switch, solenoid locking and key transfer in a single system
- · Easy installation through comprehensive accessories
- Protection against lock-in

Features STS-SXB01M

The unit is particularly suitable for applications with:

- Full body access (lock-in danger)
- Several secured entries
- · Single-channel/ redundant/ diverse safety circuits
- · Rugged ambient conditions

Approvals and marking

Function

Safety switch (type 2) for separating guards with optional key removal.

Application

To secure separating guards such as safety gates and hoods in machine and plant engineering.

Design and Operation

Attention!

Hazards must be ruled out before the movable part of the guard can be opened!

Optionally, a key can then be removed.

The STS switch unit must be integrated into a system and connected with a control unit so that the hazardous machine can only run when the guard is locked and closed.

The key can be removed at any time, whereby hazards must be ruled out immediately. If the access is opened and the actuator is removed from actuator module B the key can be removed from key module 01. The door is now blocked when open and an escape route is thus secured. Only after the key has been returned to its starting position and the door was then closed can the machine be restarted. Opening of the access is queried by the contacts of actuator monitoring.

STS-SXB01M is usually used in the system in connection with additional STS units and SAFEMASTER products (e.g. Emergency stop module LG 5925, Softstarter with DC-Brake BL 9228). The key with optional removal can serve as protection against lock-in or for the operating release of these units (e.g. STS-M10A, STS-M11A, STS-M12M, STS-M10B01M).

Switching logic

Technical Data

Enclosure: Stainless steel V4A / AISI 316L

Degree of protection: IP 65
Temperature range: -25 °C to +65 °C
Storage temperature: -40 °C to +80 °C

Mechanical principle: Rotating axis with redundant actuator Connection method: cage tension spring clamps

min. connection cross-section: 0.25 mm²
max. connection cross-section: 1.5 mm²
Cable entry: 1 x M20 x 1.5

 $B10_d$: 2 x 10^6 switching cycles Electrical service life: 5 x 10^6 switching cycles min. operating speed: 100 mm/s

min. operating speed: 100 mm/s max. operating speed: 500 mm/s

(by exception, 1500 mm/s is permitted)

 $\begin{array}{lll} \text{max. switching frequency:} & 360/h \\ \text{Nominal voltage } \text{U}_{\text{N}} & \text{AC/DC 24 V} \\ \text{Nominal voltage range:} & 0.85 \dots 1.1 \text{ U}_{\text{N}} \\ \text{Power consumption:} & 0.3 \text{ W} \\ \text{Rated impulse voltage:} & 0.8 \text{ kV} \\ \text{Rated insulation voltage:} & < 60 \text{ V} \\ \end{array}$

Contacts: 1 NC contact, 2 diverse changeovers

contacts

Switching principle: Changeover contact with forced-opening

snap-action switch

max. operating current: 2 A Short circuit strength,

max. fusing: 4A gG Contact material: 4A gG Ag / AgSnO₂

Indicator LED red/green, separate selection

possible

Test principles: EN ISO 13849-1:2008 EN 1088+A2:2008 EN 60947-5-1:2005

EN 60947-5-1:2005 GS-ET 19:04.2004

Intended use: up to max. cat. 4, PL e according

to EN ISO 13849-1

Add 2nd actuator module,

cat. 4

Type STS-SXBB01M

Mounting: according to DIN EN 50041
Contact elements: IEC EN 60947-5-1 Appendix K
Additional requirement

Diagnostic coverage (DC),

for cat. 4 structure (as single unit):

 (mechanical):
 cat. 2
 cat. 3

 Logic and output
 cat. 2
 cat. 3

of common cause: see table in STS design guide

Repair and replacement: by manufacturer only Semi-annually recommended

min. once a year

Variants and Combination Options

Because of their modular design the basic units of the Safemaster STS System can be combined and expanded according to customer requests. This allows for a variety of possible units and functions.

Overview of the basic units

	Application				
	Basic function with separate actuator	Forced key removal as protection against lock-in or to operate additional units	Optional key removal as protection against lock-in or to operate additional	Units without actuator	
Group of the basic unit			units		
Mechanical	STS-M10A	STS-M11A	STS-M10B01M	STS-M12M	
Locking	STS-ZRHA	STS-ZRH01A	STS-ZRHB01M	STS-ZRH01M	
Switch	STS-SXA	STS-SX01A	STS-SXB01M	STS-SX01M	

For additional information refer to the data sheets of the individual modules and other basic units.
